Your College Based Fee: Past Benefits and Future Needs

Your College Based Fee (CBF) has funded several beneficial activities and projects determined by math majors in consultation with math faculty. They include:

Student Workshop:

CBF supports workshops for some of the most important, and most difficult, classes in the mathematics major such as Math 248, 412, and 481.

Tutors and Graders:

CBF supports tutors and graders for upper division courses.

Summer Research:

CBF supports math majors who work with faculty members on summer research.

Student Travel:

CBF supports student attendance at regional and national mathematics conferences and meetings.

Student Lounge:

CBF supported the 2002 student lounge remodel and supported the 2009 purchase of new computers (to be installed soon, if not already).

Class Accessibility:

Most importantly, CBF support has increased class accessibility.

Due to the current budget crisis, an increase in the CBF is essential in order to ensure the classes students need to graduate. Please support the increase in the CBF!

In 2008, there were three summer research groups. One of those groups (pictured at left) included Sam Saiki, Paul Sinz, and Mark Gabaya with Dr. Anton Kaul.

Last year, students Ryan Harris, Alex Eames, and Ryan Ward (pictured at right) attended the Northern California MAA Sectional meeting in Sacramento. The CBF has also supported student travel to MathFest.
